DETAILED ACTION***Double Patenting***

1. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

2. Claims 1 – 21 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1 – 45 of U.S. Patent No. 6,911,682 in view of Popovic *et al.* Claims 1 – 45 disclose the limitations of claims 1 – 21 except for an insulative layer on the surface facing the nanotube ribbons [claims 1, 5, and 17] and applying electrical stimulus to move the nanotube ribbon away from the conductive elements [claim 20]. Popovic *et*

Art Unit: 2891

al. (US 4,979,149) teaches an insulative layer opposite the movable component [column 3, lines 50-55] and a method of moving the movable component away from the conductive elements [Figure 1]. It would have been obvious to one of ordinary skill in the art to use the insulative layer since this provides a reduction in the number of manufacturing steps for providing a memory element and the moving away from the conductive elements provides a binary memory element [column 2, lines 20-25].

Allowable Subject Matter

3. Claims 1 – 21 are allowable pending a properly filed terminal disclaimer.
4. The following is an examiner's statement of reasons for allowance: applicant discloses a circuit, circuit array, and method of using a circuit cell where a nanotube ribbon disposed between first and second electrically conductive elements where the ribbon is movable toward one of the electrically conductive elements in response to an electrical stimulus.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
